About SmartSight Analytics

IT services, ERP, software and analytics for growing businesses.

We design and build websites, web and mobile apps, ERP systems, custom software and dashboards around how your business actually works. The products in this portfolio are our starting points, each one adapted to the client process, roles and data.

What we build

- Web and mobile applications
- ERP and customized ERP modules
- Custom business software and automation
- Analytics dashboards and reporting

How we work

1. Discovery call and free project audit
2. Solution blueprint: screens, modules, roles
3. Design and development
4. Testing, training and launch
5. Monthly support and improvements

In this portfolio

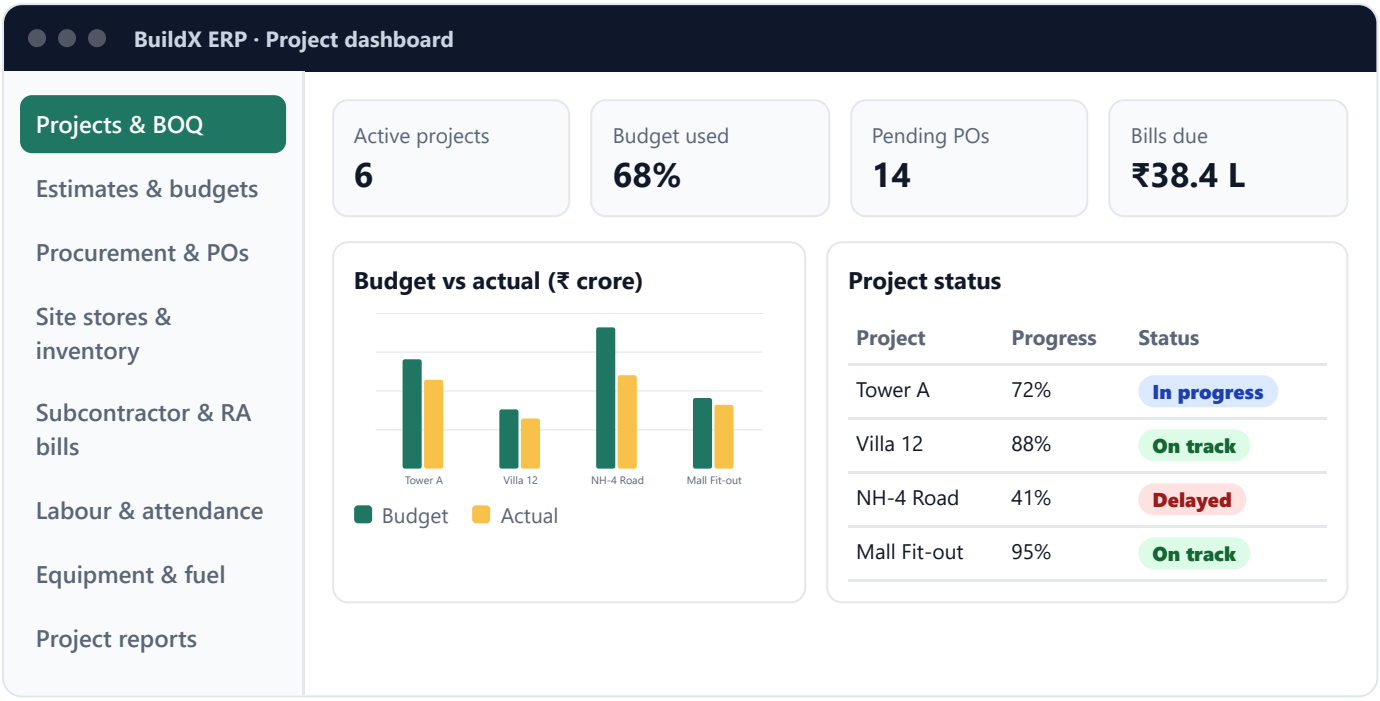

BuildX ERP	Construction	**3**
MediCore HMS	Healthcare	**4**
Accounts & Billing	Finance & Accounts	**5**
Analytics dashboards	Analytics	**6**

All screens in this document use illustrative sample data. Live demos are available on request.

Construction · In development

BuildX ERP

One ERP for projects, procurement, site stores and billing.

Illustrative screen with sample data.

The problem

Site expenses, material movement and subcontractor bills sit in separate sheets, so cost overruns surface only after a project is already over budget.

How we solve it

A single ERP that connects the BOQ to purchasing, site stores, labour and running bills, so every rupee is tracked against the project budget as work happens.

1. BOQ & budget
2. Material indent
3. Purchase order
4. GRN at site
5. Running bill
6. Payment

Core modules

- Projects & BOQ
- Estimates & budgets
- Procurement & POs
- Site stores & inventory
- Subcontractor & RA bills
- Labour & attendance
- Equipment & fuel
- Project reports

User roles

Project manager · Site engineer · Store keeper · Accounts · Management

Key reports

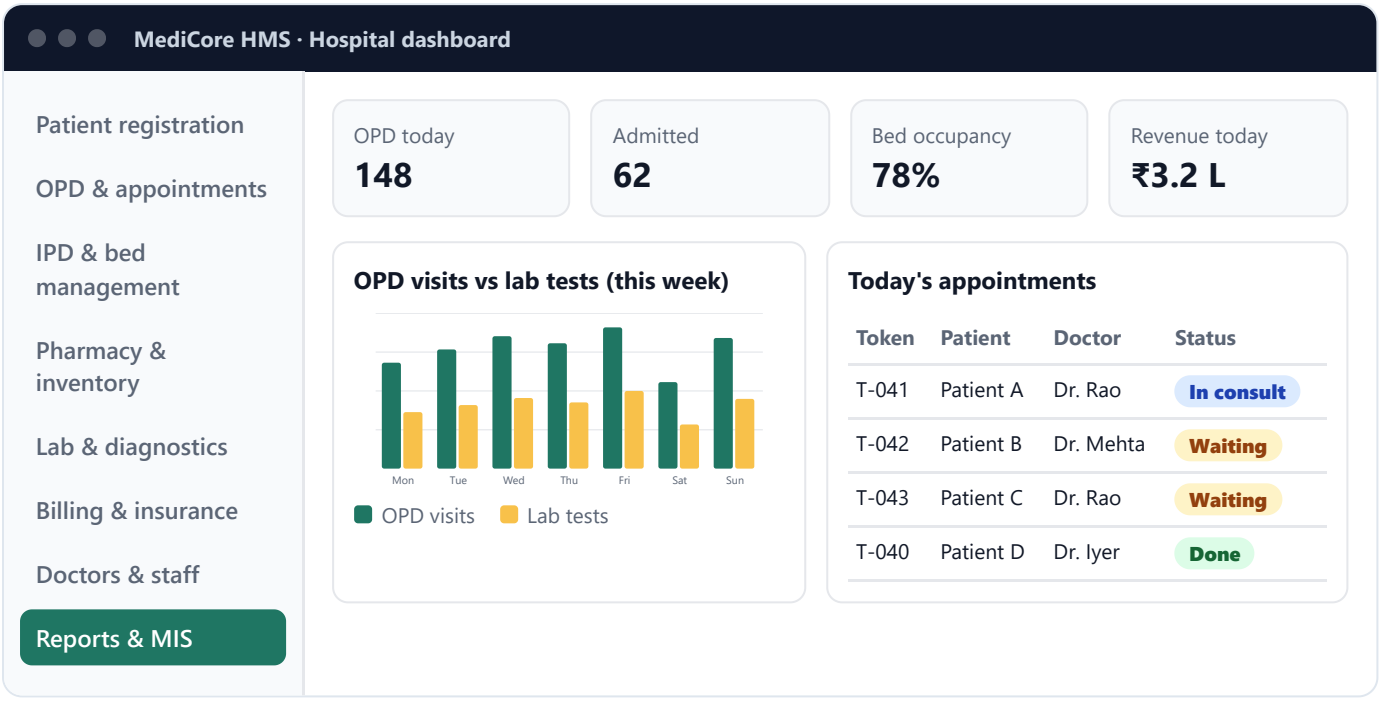

Budget vs actual · Material consumption · Subcontractor ledger · Project cash flow

Best fit: Contractors, builders and EPC firms

Healthcare · In development

MediCore HMS

Patient care, billing and hospital operations in one system.

Illustrative screen with sample data.

The problem

Registration, doctor notes, pharmacy and billing run on separate registers, so patients wait longer and charges get missed.

How we solve it

A hospital management system that follows the patient from registration to discharge, linking OPD, IPD, pharmacy, lab and billing so nothing is missed or entered twice.

1. Register → 2. Consult → 3. Investigate → 4. Treat / admit → 5. Bill → 6. Discharge

Core modules

- Patient registration
- OPD & appointments
- IPD & bed management
- Pharmacy & inventory
- Lab & diagnostics
- Billing & insurance
- Doctors & staff
- Reports & MIS

User roles

Receptionist · Doctor · Nurse · Pharmacist · Lab technician · Billing · Admin

Key reports

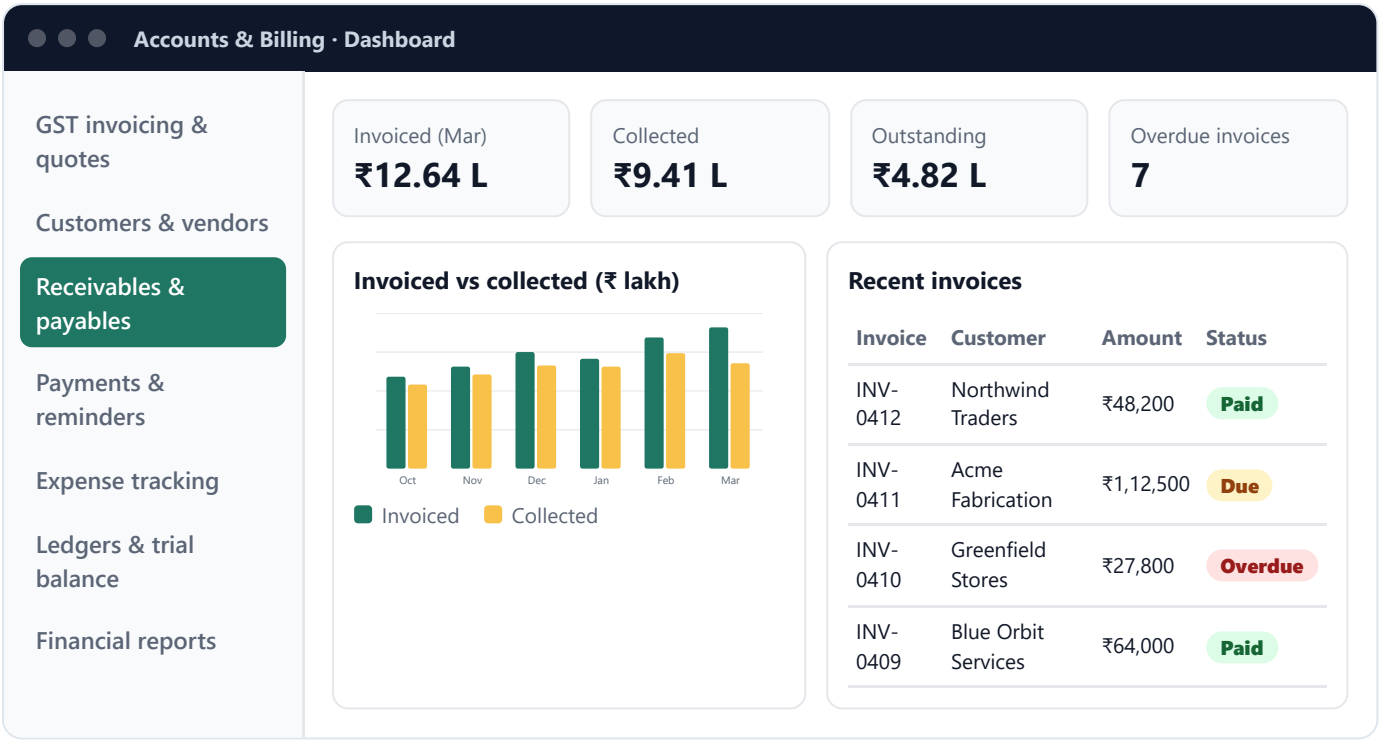

Daily collection · Doctor-wise revenue · Bed occupancy · Pharmacy stock & expiry

Best fit: Clinics, nursing homes and small to mid-size hospitals

Finance & Accounts · Production-ready

Accounts & Billing

GST invoicing, payments and ledgers in one place.

Illustrative screen with sample data.

The problem

Invoices live in Excel, payments are chased over WhatsApp, and nobody has a clear view of who owes what.

How we solve it

One system for quotes, GST invoices, payment tracking and ledgers, with automatic reminders and month-end reports ready for your accountant.

1. Quote → 2. GST invoice → 3. Payment → 4. Reminder → 5. Ledger → 6. Report

Core modules

- GST invoicing & quotes
- Customers & vendors
- Receivables & payables
- Payments & reminders
- Expense tracking
- Ledgers & trial balance
- Financial reports

User roles

Owner · Accountant · Billing staff · Auditor (view only)

Key reports

Receivables ageing · GST summary · Profit & loss · Expense by category

> **Best fit:** Service businesses, traders and small manufacturers

Analytics

Analytics Dashboards

Interactive dashboards built on your data. Live versions are on our website.

Retail Sales Analytics

An interactive dashboard that tracks revenue, profit, categories and regions, built on your own data.

> **Best fit:** Retail chains, distributors and multi-store businesses

Restaurant Sales Analysis

A dashboard that ranks menu items, tracks peak hours and compares outlets so you can price and staff smarter.

> **Best fit:** Restaurants, cafes and cloud kitchens

Logistics Performance

A dashboard that follows deliveries, delays, routes and cost per trip so issues surface while they can still be fixed.

> **Best fit:** Transporters, fleet owners and distribution teams

Do not see your industry?

Everything in this portfolio is a starting point. We build custom software, ERP modules, apps and dashboards around your exact process. Share your requirement for a free project audit and a written recommendation within 72 hours.
